

Lucifer Lighting New LED Optics and Sources

Posted on February 11, 2021 by davidc@ccr-mag.com

Lucifer Lighting, known for designing and engineering high-quality, unobtrusive architectural lighting fixtures, has responded to the changes in the way we work and live with the release of three new LED platforms.

“With more people spending more time at home, there’s increased attention to details that improve our work and living environment,” notes Alexandra Mathews, Executive Vice President of Lucifer Lighting. “Higher quality and warmer toned interior lighting help improve productivity and maintain natural, circadian rhythms,” she adds.

To meet this demand, Lucifer Lighting offers two new sources, a fixed 2200K LED, as well as a new warm dim LED specifically calibrated to the incandescent dimming range from 2700K to 1800K. These 90+ CRI sources are available for all Lucifer Lighting downlights, trackheads, and surface mount fixtures such as the Squilinder and Cylinder, with numerous driver options.

In addition, Lucifer Lighting has introduced a punchy narrow beam optic, with beam angles as tight as 10° with center beam candle power (CBCP) as high as 12,500. This new, high density LED source has been optimized for narrow beam optics, and notably is flexible enough to transition to standard optics and wider beams. Compatible with all Lucifer Lighting drivers, the narrow beam optic is available in 80+, 90+, and 97+ CRI with 2 SDCM for 2700K, 3000K, 3500K and 4000K.

“We have always worked closely with leading architects and designers,” says Alexandra Mathews. “We pride ourselves on being responsive to their creative needs and so are thrilled to be able to meet the demand for these new, leading technologies in light sources. Now, designers can create the warm, inviting environments they envision and have a focused beam to highlight special objects and places, using the Lucifer Lighting fixtures they trust.”

About Lucifer Lighting

Lucifer Lighting creates innovative, precision-engineered lighting solutions that designers and architects depend upon to illuminate their most beautiful spaces. For 40 years, this family-owned, San Antonio, TX-based company has led the industry by designing and manufacturing lighting fixtures with the slimmest profiles, most compact housings, and maximum light from the highest-quality sources. You'll find their products from the Instagram office in New York to the Natural History Museum in London, the Beverly Hills Hotel, the Wynn Hotels in Macau and Cotai, the Microsoft headquarters in Sweden, the San Francisco Museum of Art, and Polo Ralph Lauren stores worldwide. Lucifer Lighting's goal has always been the same: to light the world's most beautiful spaces.
