SOURCES

Designers Richard Ginnet and Mark Cole combined two existing **LED** designs, the *Pod* and the *Poppy*, to create *Team*. Designed with large spaces in mind, this impressive fixture is offered in three, four and five shade units, with the largest model measuring over 5 feet in length. Custom combinations can also be created. The lampshades are available in eight different wood veneer finishes, making it appropriate for hospitality and retail usage.

Blended curves, straight lines and 75 degree angles create an understated yet striking effect. **LED** lighting systems, such as recessed surface installations along walls and ceilings. We offer made-to-order, lightweight, sustainable components that use energy-efficient, replaceable LED sources to create an exceptionally even, white glow. This is available in standard and custom finishes for even more versatility.

Lighting

For high-ceiling applications and spaces requiring greater light levels, **Luxor Lighting Company** introduces the *Y Series* of its LED downlight family. These lights are engineered for ceilings up to 30 feet tall, using LEDs delivering 1100 (17W), 2000 (30W) and 3000 (39W) lumens. The *Y Series* family offers fixed, adjustable and wall-wash fixtures for dry and wet locations, and can be installed "zero-clearance"—meaning that the fixture's stem is flush with the ceiling.

Luxor's 360 is a fully-adjustable LED desk light with an extended arm reach and remote control. The 360 features an innovative arm that moves in concert with its rotating base, directing light exactly where it is needed for optimal lighting and functionality. Its high-power, dimmable LEDs produce 100 lumens/foot at a height of 16 inches above the work surface, and are guaranteed to deliver 45,000 hours of continuous use.
